

### UTA reflection

My experience with the UTA program was quite good! I actually found about the program from my friend, he didn't explicitly recommend I sign up for it but he definitely inspired me to do so. The experience I gained from being in the UTA program was a better understanding of the class I helped with: vector calculus. I had even been given the opportunity to give a lecture, which was super fun! I feel that this experience has allowed me to understand what it will be like being an instructor, something I want to do in the future. The weekly meetings helped me learn to be a better tutor and grader by showing me some new techniques. Being in the program has definitely improved my confidence in being able to teach and grade. The instructor I was matched with, Dr Varghese was very accommodating of my schedule and extremely friendly! I'd definitely recommend this program to anyone that likes doing math and teaching it. It is especially good for someone that wants to go into academia.
